
CONTINUING EDUCATION OPPORTUNITY

RO TSAERT Dental Laboratory in Hamilton

71 Emerald Street South, Hamilton, ON L8N 2V4

Thursday April 9th 2015 – 6:30pm registration, 7pm start

An *IMPORTANT* course for the whole team!

DDS = Class 3 CE

RDA/CDA = 3 hours for points

RDH = Portfolio goal with over 40 hours of resources to build your form 7 !

Part 1: Office Infection Control, Sterilization Monitoring & Fluoride Varnish – ***‘Best Practice’ Decisions Should Not Be Costly Decisions!***

Michelle Aubé-Simmonds RDH

The focus of a typical day in the dental office allows for the planning and delivery of high quality, patient/client centered care, but does not always allow for lengthy team conversing on topics that surround the day-to-day functions and materials of the dental office. ‘Best Practice’ has to follow the regulatory bodies’ standards of care, while product selection for best practice must be effective and controlled to prevent overstocking and over budget spending.

‘Best Practice’ decisions need not be ‘costly’ decisions for either ethics or your budget! Understanding the DDS’s philosophy of patient/client care and practice management is crucial to defining the office ‘best practice’ approach. Team members must make decisions that respect and balance standards and guidelines of each other’s regulatory bodies.

Learn how to utilise the RCDSO Infection Prevention and Control Guidelines as a template for ‘best practice’. Link the RCDSO’s Record Keeping Regulations to help you understand the responsibility in logging requirements for sterilization. Compare the provincial regulatory body’s standards and guidelines. Who is saying what about infection control procedures and sterilization monitoring?

Look at a current snap shot of theories and transitions into the benefits of fluoride varnish and learn who is saying what when it comes to risk assessment and the selection of fluoride application.

Lastly, let’s take a quick glance into effective organization and control of stocking and ordering supplies.

Come join us on this interesting and effective approach on making ‘Best Practice’ decisions.

Part 2: Stop the Bleeding! Eliminate the Cause of Infection: Managing Symptoms is Not Enough Jim Hyland BSc, DDS

Build deeper relationships and inspire your patients by enhancing patient care and wellness. Discover new research linking oral infection with systemic risk. When you present periodontal disease as a serious condition and your patients understand how this disease will impact overall health, they will be more accepting of your treatment plan.

To register please call maxill @ 1-800-268-8633 or email customerservice@maxill.com

Fee: \$35.00 for each team member - if DDS attends team members will be free.

Learn four tests that will convince your periodontally affected patients that they require treatment and enhance patient compliance with your recommendations.

Effectively use microbiology testing and antibiotic rinses for predictable results in the treatment of periodontal disease and breath odour as biofilm diseases.

Transform your dental hygiene department from a “cleaning” system to a “healing force”.

Get your patients involved in their oral health so they ask you “How are my gums? I don’t want them to bleed!”

Dr. Jim Hyland BSc, DDS graduated from the U of T in 1976 and has always been one of the first to implement the latest techniques, research and philosophies in oral care. Dr. Hyland’s experience, in addition to private practice, includes teaching at U of T Faculty of Dentistry, Seneca College, George Brown College as well as the dental staff member of the North York Hospital. He regularly lectures and writes on a variety of topics related to diagnosing and treatment of periodontal disease as an oral infection, interceptive preventive care, decreasing the oral systemic risk and breath odour. In 2014 he launched **www.GumGuardians.com** to educate the public about the connection between the health of their gums and physical wellbeing and to provide the latest information about how to prevent and to treat gum disease and breath odour.

Michelle Aubé-Simmonds RDH is a professional and enthusiastic leader who has the ability to motivate and create a positive environment and uplifting learning atmosphere. Founder and owner of Positive Impact Dental Hygiene Consulting, graduate of Fanshawe, Algonquin and Holland College, past CDHO Portfolio Assessor, Fanshawe College Theory Educator, UWO Clinical Educator, Maxill Dental Hygiene Product Advisor, Straumann Implant Speaker and Self-initiated Clinical Practitioner, Michelle’s knowledge and experience speaks for itself. After 24 years, dental hygiene is still her passion. Her mission is to share her knowledge and deliver strategies to bridge the gap between 'Evidence Based Decision Making' and direct implementation of new knowledge into clinical practice. She is uniquely qualified to discuss infection and sterilization techniques. Through group sessions and one-on-one learning, Michelle has helped hundreds of dental professionals reach their Best Practice goals.
